

HIMA GEORGE THAREPPARAMBIL

UBC COMPUTER SCIENCE, 3RD YEAR | [himageorge.github.io](https://github.com/himageorge) | github.com/himageorge | himageorge5@gmail.com

TECHNICAL EXPERIENCE

Math and Computer Science Tutor

North Seattle College, Seattle | Jan 2025 - June 2025

- Provided one-on-one tutoring in Calculus, Python, and Java, assisting students with their assignments and reinforcing key concepts.
- Led group tutoring sessions, fostering collaborative problem-solving in mathematics and programming.

Content Writer Intern

InspiritVR, Remote | Nov 2022 - Dec 2022

- Wrote high school biology study guides for general biology and CBSE biology curriculums.

PROJECT EXPERIENCE

Did Fall Come to Vancouver Early this Year? | Personal Project

- Used **ArcGIS** and **QGIS** to trace areas in Vancouver with over 50% tree canopy cover.
- Built a **Python** script using Google Earth Engine to process Sentinel-2 imagery of the canopy regions, calculating NDVI and raw spectral band variations to compare leaf health trends in late-summer of 2025 and 2026.
- Analysed weekly changes in 2025 and 2026 to determine that Vancouver's canopies maintained their structural greenness deeper into September of 2026 compared to September of 2025.

PrairieJournal | Cmd-f Hackathon | [himageorge.github.io](https://github.com/himageorge)

- Collaborated in a team of three to develop a Chrome extension for the learning platform, PrairieLearn, that detects incorrect answers on practice questions and prompts students to chat with an integrated AI tutor using the **Gemini API**.
- Built a persistent data layer using Chrome's storage API to store user chat history on a personalized dashboard, organized by course and module.
- Designed the complete end-to-end user flow using **JavaScript**, managing state transitions and API communication between the extension and Gemini backend.

SpaceTraders | Personal Project | [himageorge.github.io](https://github.com/himageorge)

- Built a terminal-based **Python** game using the SpaceTraders REST API, where you can control an agent in a shared universe to mine asteroids, trade goods, and fulfill delivery contracts.
- Designed an event sourcing architecture with immutable event types using Pydantic and **SQLite**, enabling full game state reconstruction from event replay.

EDUCATION

BSc in Computer Science | Sep 2025 - Expected: 2028

University of British Columbia, Vancouver

- Relevant Courses: Machine Learning and Data Mining, Introduction to Relational Databases

Associate Degree in Computer Science | Jan 2024 - June 2025

North Seattle College, Seattle

- GPA 3.884, 4x President's List

SKILLS

Programming Python, Java, C/C++, JavaScript
Tools ArcGIS, QGIS, React, SQL, Docker

EXTRA-CURRICULAR ACTIVITIES

- **Admin Coordinator** | UBC CSSS | July 2026 -
- **Mentee** | UBC Tri- Mentoring Program | 2025 - 2026
